# How to change app name android studio

Continue

Continue

Turn on Themed icons and pick a solid or wallpaper-based color.Access those options here: Settings > Wallpaper & style.A third-party app with icon packs provides the greatest flexibility. This article details your options for changing the color and icons of your Android apps. By default, app icons on some Android phones, like the Pixel, are essentially unchangeable, both the color and the actual icon. Spotify, for example, is green and black, and there's no easy way to change that. There are, however, some cases where the app lets you modify the icon from a selection of options. Or, the app has closer ties to your phone's settings than other apps, so if you change the color setting on your phone, the app color and icon style will change, too. If all else fails, third-party apps can take care of the whole process for you through icon packs. You can modify the app's icon color and entire icon graphic that way. Here are the Google-approved options for changing the color of an app icon: These steps were made using Android 12 and 13. Specific steps may differ based on the operating system version you're running, but the basic process will be the same. One way to quickly change app icon colors is to use Themed icons. But there's a catch: Not every icon will change—only Google-provided ones like Chrome, YouTube, Camera, Phone, Messages, Play Store, Gmail, etc. Go to Settings > Wallpaper & style > Themed icons to turn this on. The icon style you end up with depends on the colors used in your wallpaper (see below) and if the Dark theme is on. Themed icons work as-is, so you can turn it on and forget about it. Or, to work in a bit of customization, you can manipulate the app colors through two sets of color options: Wallpaper colors and Basic colors. For example, if you want those Google apps to be purple, you can pick that color from Settings > Wallpaper & style > Basic colors. If you want the app icon colors to be sampled against the wallpaper, open Settings > Wallpaper & style > Wallpaper colors and pick one of those color combinations (the combos you see there change depending on the wallpaper you're using). Those color styles also apply to folder backgrounds, the lock screen, and other places. They change the color of Google's app icons because they've included their apps as part of the set to which the color setting applies. They may expand the option to third-party developers in the future so that your other apps will change color too. Changing app colors is also possible by simply changing the whole app icon. The only built-in method for doing that is to follow the directions above. The color palette you pick, the wallpaper you're using, and whether the dark theme and themed icons options are on influence how some of your apps appear. But what if you want to pick a different app icon, maybe one for a non-Google app? There aren't icon packs in the phone's settings that you can cycle through, nor is there an approved way to swap out one icon for one of your choosing. However, the app developer will include an app icon customization option in the app's settings in some rare cases. One example is the DuckDuckGo browser. A screen called App Icon is in that app's settings, which has several options. It doesn't matter what your wallpaper color is or what other toggle you enabled in your phone's settings; this app's icon is determined by what you decide in its settings. If the app you're trying to change the icon color for doesn't have that level of customization, consider using a third-party tool. You might need a different Android launcher than the one that came with your phone for that to work. FAQ How do I change the color of apps on a Samsung phone? To change the color of your apps on a Samsung phone, tap and hold an empty area of the home screen and then tap Wallpaper and style. Tap Color Palette, and then choose the color you want. Tap Set as Color Palette. The color palette changes will affect stock apps and icons. How do I change the color of my iPhone apps? To change the color of apps on iOS 14, you'll use the Shortcuts app to alter your apps' appearance. In this case, you're not directly changing the app's color; rather, this is a workaround that creates a "button" that can be different colors. To do this, launch the Shortcuts app and tap Add (plus sign); in the New Shortcut screen, tap Add Action. Search for and select Open App, and then, on the New Shortcut page, tap Choose. Locate the app whose appearance you want to change. Back on the New Shortcut page, you'll see the app name; tap More (three dots), change the app's name, tap its icon, select Color, and choose a new color. Use other customization options here to further change its appearance. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! You can use Shortcut Maker to customize app icons and names on any device.Go to Settings > Themes to download and apply icon packs on Samsung devices.You can download and install custom icons via Google Play Store on any Android device. You may need to install a launcher to change app icons. This article covers how to change app icons on your Android smartphone, including applying custom icons on a Samsung phone or tablet. One of the best features of Android is the option to customize nearly anything you want, from the wallpaper and lock shortcuts to the way the icons look and feel. What's more, there are many ways to apply custom icons. You can even create your own! Before you can change app icons, you'll need to download and install custom icon sets. You can find them at the Google Play Store. Here's how to install them: Find a set of custom icons you like at the Google Play Store. The best way to find them is to type custom icons in the search bar (located at the top). When you find an icon set you like, tap the entry in the search results. Then tap the green Install button. Wait for it to finish, and then return to the home screen or tap Open. Like the Galaxy Note 20, Samsung smartphones and tablets use a reskinned version of Android called One UI. That means you can also customize the home screen and interface with unique wallpapers, widgets, and app icons. Before you can apply custom app icons, you must download theme packs from the Galaxy Themes app. Custom themes used to be available at the Galaxy Store, but Samsung devices now have a separate application called Galaxy Themes. On older devices, Samsung added the new app in a recent software update. On newer devices, it comes pre-installed. You can also use Google Play to download custom icon packs on Samsung, if you prefer. Here's how to install app icons using Galaxy Themes: Open the Galaxy Themes app or go to Settings > Themes. If you're not already logged in, tap the menu button in the top left and tap the profile button to do so. If you do not have a Samsung account, you will need to create one. Tap the Icons button on the bottom (third from the left). Find an icon pack you like. Some icon packs cost money. If you don't want to spend anything, be sure to look for the packs listing Free underneath, not a price. Tap the icon pack to open the store page and then select the Download button at the bottom of the screen. An advertisement may appear, and the download should start after it finishes playing. Wait for it to finish. If you want to apply the icon pack right away, tap the Apply button, which replaced the Download option. Even if you installed a custom app icon pack, you need to apply it first before seeing any changes. Just having the icon pack installed does not make them active or visible. Some icon packs will display a prompt immediately after install, allowing you to apply them. However, not all of them do this. Sometimes, you can apply the custom icons using a tool that comes with the icon packs you install. Here's how: Open the icon pack for the pack you downloaded. Accept any permission requests. Depending on the app, you may or may not see an Apply button. Some icon packs require you to have a custom launcher to use them. If you haven't already applied the icon packs previously installed on your Samsung, here's how to activate them or swap them out. Open Galaxy Themes either by clicking on the icon in your app tray or going to Settings > Themes. Tap the menu button in the top left, and select My Stuff. At the top of the screen, tap the Icons option. Then tap the icon pack you wish to apply. At the bottom of the page, select the Apply option. You may or may not see a warning, tap Agree or Apply again to continue. That's it! Enjoy your new icons. Most icon packs you download from Galaxy Themes will only change the appearance of official Samsung or system app icons. You will need to use another method to change the appearance of other app icons. The short answer is yes, you can. With some icon packs, you can apply them directly from within the native app. If that doesn't work, you can always use another app like Shortcut Maker. If you want more freedom when changing app icons, like adding a custom name, you'll need to install another app called Shortcut Maker. Go to the Shortcut Maker Google Play Store page. Then, tap the green Install button and wait for it to download and install. To change the display name of an app, you'll create a shortcut which means creating an additional app icon with custom parameters. Here's how: Open Shortcut Maker. Choose the type of shortcut you wish to make from the list. Choose the Apps option for an app icon. Next, select the app icon you want to customize from the list of installed apps. Use the Tap to Edit Label button (it will also show the app name) to change the name. Then, enter the new custom name or label and select Done. Edit any other custom options you want (you can also choose a custom app icon). When you're done, tap the big blue Create Shortcut button in the bottom right. If you want to apply app icons individually or apply icons from a pack you installed, you can also use Shortcut Maker. Here's how: Open Shortcut Maker. Choose the type of shortcut you wish to make from the list. For an app icon, that would be the Apps option. Next, select the app you want to customize from the list of installed apps. To apply a new icon, use the Tap to Edit Icon button (it will also show the current app icon). You will see a list of available options for customizing the icon on the next screen. You may see custom icon packs you have installed, and you can also use text, emojis, gallery images, and system icons. Choose the source containing the icon you wish to use, and then select your image. You will see the new icon you have selected on the right side of the page. To apply it, tap the blue checkmark in the top right. Edit any of the other custom options you want (you can also change the name). When you're done, tap the big blue Create Shortcut button in the bottom right. Creating custom icons and adding them to a set is a lengthy and complex process, and explaining how to do it is best left for a separate guide. It is possible, and it can be a lot of fun. It can also be a lucrative business opportunity if you're good at it! You can sell custom themes on the Google Play Store or Samsung Themes store. On all Android devices, you can play around with app icons, including their look and feel. You can also customize your device by applying custom wallpaper, unique screensavers, changing the lock screen display, and much more. An app like Shortcut Maker makes it easy to customize the appearance of individual app icons, even those not affected by installing a custom icon pack or a Samsung Galaxy Theme. FAQ How do you change the size of app icons on Android? For most Android phones, you will need to use a third-party launcher. For most Samsung phones, you can go to Settings > Home Screen and select a different size for your Home Screen and Apps Screen grids, which will resize all of the icons on that screen. How do you change icons on Android without an app? On some phones, you can select alternatives for the icons of built-in apps. Long press the icon, choose Edit, and tap the icon you want to use.
